A Frame of Mind

Community Care as an Extension of Healthcare

By: Tom Mikkelsen, President & Scientific Director

When we think of healthcare, nurses, doctors, hospitals, and informal caregivers likely come to mind. And rightly so, given the tremendous role they play, especially when the health need is urgent – and an especially stark reminder through our current healthcare crisis. Often overlooked is the care provided to people outside of the formal healthcare system, the care they receive from their community.

Social Distancing Yes, Social Isolation No – Caring for Those Living with Dementia, Stroke and Neurodegenerative Diseases

By now you have heard a lot about the COVID-19 virus and its impact in Canada and around the world, including some mandatory self-isolation in parts of Europe and elsewhere. While trying to maintain a safe distance from others during this time is a good idea, we cannot forget about those who are the most vulnerable, including people living with dementia, stroke or neurodegenerative diseases.

During the current pandemic, many regions are reducing elective surgeries and clinic services, so resources are available to manage the COVID-19 outbreak. This is an unprecedented challenge to our society and health care system; but there are some easy things we can do to ensure the health and well-being of some of the most vulnerable members of our society – those living with dementia, stroke and neurodegenerative diseases.

Read full article [here](#), check out the [infographic](#) from [ONDRI](#) and watch Dr. Rick Swartz interview with [CTV](#) on Your Metro Morning on April 1, 2020 about the four simple ways to care for our elderly.

OBI – GEEK: Supporting Care in the Community

Earlier last year in May, OBI announced the first three recipients under the newly launched [Growing Expertise in Evaluation and Knowledge Translation \(GEEK\) program](#). The program supports community-led organizations which aim to improve the lives of people with brain disorders.

OBI had the opportunity to meet the [2019 GEEK](#), program participants and caregivers in action and thriving in their respective cities. You can also watch a heart-warming [video](#) from OBI-GEEK Christian Horizons.

Active Lives Active Giving – Active Lives After School Dufferin (Orangeville); Educational Pathway to Employment – Christian Horizons (Toronto); Brief Intensive Case Management – Acquired Brain Injury – Ontario Brain Injury Association (Nipissing District).

Katie's Run

[Katie's Run](#) held its 8th Annual event in Haliburton, Ontario to raise funds for epilepsy research. The theme for this year was 'Loss' and the community was invited to share their personal stories on how epilepsy has created and manifested loss in their lives. Katie's Run has been at the forefront of raising awareness and fundraising for epilepsy research in the province, raising up to \$250,000 in eight years. This year, Katie's run was able to gather over \$60,000. The funds raised will support EpLink and its research into [SUDEP](#) and their partnership with the [Clinic to Community](#) program. Watch personal stories of loss shared by the community [here](#).

AGE-WELL National Impact Challenge

[AGE-WELL](#) held its National Impact Challenge: Startup Edition on July 26, 2019. The Startup Edition recognizes top startups and supports entrepreneurship in Canada's technology and aging sector. This year five finalists pitched at each of three regional events held in Montreal, Vancouver and Toronto, explaining how their technology-based solution can support healthy aging. OBI's ONtrepreneurs iMerciv was one of the finalists in the Toronto region.

Garth Smith, OBI's Vice President, Business Development & Partnerships shared the judging panel with Brianna Croft, [SE Futures](#); Bill Jarvis, Ran Manor, [Baycrest](#) and Sandra McKay, [VHA Home HealthCare](#). The evaluation criteria were based on their business model, impact on the community especially the aging population and acceleration of neurotechnology in Canada. The AGE-WELL National Impact Challenge aired on Zoomer TV and can be found [here](#).

Walk for Dravet Syndrome Research

The 8th Annual [Dravet Walk](#) took place at the Constance Bay Community Centre on Saturday, September 21, 2019. The walk was a family event that included a 3km walk, face painting, balloons, silent auction, fundraiser BBQ, raffles, and entertainment to raise money for Dravet Syndrome research. To date, Dravet Walk has raised almost \$400K since its inaugural walk in 2012 – and this year they raised over \$36,000 in partnership with OBI and [EpLink](#). All proceeds from the walk will support recruitment of children with Dravet Syndrome for a clinical [study](#) of cannabis extract for the treatment of epilepsy.

Dr. Joseph Martin Named for Induction to the Canadian Medical Hall of Fame

Congratulations to Dr. Joseph Martin, Former HMS Dean Martin, honored by the [Canadian Hall of Fame](#) for his ability to promote collaboration in building and expanding the institutional foundations of medical education and science in North America. Dr. Martin was a key figure in the development of the Ontario Brain Institute, where he served as co-chair of the working group that laid the foundations of OBI. Dr. Martin was also a member of the inaugural Science Advisory Council for OBI.

Linda Lee Awarded Joule Innovation Grant for MINT

Congratulations to Dr. Linda Lee for winning the [Joule Innovation Access grant](#) for her [MINT Memory Clinics](#) initiative. In the past thirty years practicing family medicine, Dr. Lee recognized gaps in how people living with dementia and other memory disorders were cared for. With her team she developed the MINT Memory Clinic model, that helps patients to be well cared for by their family doctor along with other healthcare professionals– as a **Multispecialty Interprofessional Team** (MINT). Through this model, primary care teams build their capacity to care for patients living with dementia, and support their caregivers. In turn, patients receive integrated care closer to home, right in their community. Through the MINT model, wait times to receive dementia care has been reduced by nearly 50 percent. Since launching in 2006, OBI has been an early supporter of the MINT model. Find a MINT Memory Clinic [location](#) near you.

OBI's Patient Engagement Work Recognized in Ontario Catalogue

The [Ontario SPOR SUPPORT Unit](#) (OSSU) commissioned the Knowledge Translation (KT) Program at [St. Michael's Hospital-Unity Health](#) Toronto to map organizations in Ontario supporting patient engagement in research. Patient and family engagement is a key principle of OBI's work. It ensures that our research is relevant to the needs of the patient community and facilitates the translation of that research into information, practices, and policy that improve brain health. OBI is featured (pg. 48) under one of the not-for-profits that advocate for patients to improve their quality of life through awareness, education and research for the well-being of all Ontarians. OBI Supported MINT Memory Clinic Opening in Sarnia and Mississauga

[MINT Memory Clinics](#) (Primary Care Collaborative Memory Clinics), are a proven model that helps patients to be well cared for by their family doctor and other health professionals. Each of the health care professionals is specially trained in caring for people living with dementia and memory disorders and work together in a Multispecialty Interprofessional Team (MINT).

New MINT Memory Clinics are opening in Sarnia and Mississauga, through support from OBI, United Way Sarnia-Lambton, and others that will help deliver dementia care closer to home.

Read full story on how an estimated [3000 Sarnians](#) who live with dementia often face long wait and travel times for treatment.

Dr. Tom Mikkelsen on CTV

OBI's President & Scientific Director, Dr. Tom Mikkelsen, made an appearance on CTV Morning on November 29, 2019. In his interview he touched upon how Ontario is leading the way in brain health through a [collaborative model of research](#).

Brain disorders affect 1 in 3 Ontarians. Through collaborative partnerships, OBI is working to shrink the time it takes for research to get to the community – whether it's by investing in data standardization through [Brain-CODE](#), to understand diseases and ask better questions, funding [ONtreprenuers](#) across the province or supporting key programs and initiatives in the community through [GEEK](#), OBI is working to support brain health from a number of avenues to ultimately improve brain health for all. Watch full interview [here](#).

Genome Testing for Siblings with Autism May Detect Diagnosis Before Symptoms Appear

A [10-year study](#) conducted by Dr. Stephen Scherer, Senior Scientist and Director of The Centre for Applied Genomics (TCAG) at [SickKids](#), Director of the McLaughlin Centre at the University of Toronto, is the first to quantify the predictive value of genomic testing for autism.

The study supported by several organizations including OBI, found that the presence of an ASD-relevant CNV (copy number variant) in a sibling had a high likelihood of predicting a future diagnosis of ASD or atypical development. This marks the first time that scientists have been able to quantify the predictive value of CNVs in determining these diagnoses. Read full paper [here](#).

New paper from POND – Taking a Diagnosis Agnostic Approach to Brain and Behavior in Neurodevelopmental Disorders

A recent paper by Dr. Azadeh Kushki uses a machine-learning approach to examine variability and overlaps across three different neurodevelopmental disorders and sheds light into the validity of existing diagnosis labels. Dr. Kushki is a [POND](#) researcher – OBI’s neurodevelopmental research program. Read full paper [here](#).

CP-NET Keeps the Community Engaged at Science & Family Day

[CP-NET](#), OBI's Cerebral Palsy (CP) research program, continued its strong tradition of sharing the latest knowledge on CP with the community at its seventh annual [Science and Family Day](#). Held on October 5, 2019, coinciding with World CP Day, the event brought together families of children with CP, clinicians, researchers and local organizations at the Abilities Centre in Whitby, ON. This year's event centered on the themes of mental health in children with CP and shifting the focus to ability from disability. Among the packed day of presentations, attendees had the opportunity to learn about the latest findings in CP-NET research, as well as listen to panels covering the experiences of people living with CP in dealing with mental health challenges and using strengths to navigate transitions into adulthood.

Supporting Ontario's Brain Health Community: OBI's Event Funding Program

OBI recognizes the role that events play in sharing knowledge, fostering relationships and building community, as well as how much work goes into organizing them.

The [Event Funding](#) program is designed to support not-for-profit organizations in Ontario's brain health community to increase their capacity of work for improving brain health and wellness across Ontario. Successful events in this program realize OBI's principles of integration and collaboration – bringing together all members of the brain health

community and working collectively to improve the wellness of Ontarians. The Event Funding program will be changing its funding periods this year to better align with when organizations plan their events. For 2020, applications will be due in mid-April for events taking place June 1 – October 31; and in mid-September for events taking place November 1 – March 31, 2021.

Due to public health requirements to maintain physical distance, OBI's Event Funding is temporarily on hold until directive from the Chief Public Health Officer of Canada.

Family Research Day

[POND](#), OBI's neurodevelopmental disorders (NDD) research program, hosted its sixth annual [Family Research Day](#) November 16, 2019. This year's event was a highlight of the program and its patient community, sharing the latest findings in POND research followed by questions and lively discussions between the community and POND researchers. Presentation topics were informed by the patient community, covering breaking research in genetics, the benefits of and promoting physical activity in children with NDDs, and mental health. The day additionally provided a stage for the POND's patient advisory committee's work and expansion of a new Youth Council to increase young patients' involvement in research.

OBI Convenes Research Ethics Boards to Discuss Data Sharing

The fundamental purpose of Brain-CODE is to enable research data sharing and collaboration. [Brain-CODE](#) enables greater insights into the data with the ultimate goal of driving faster translation of discoveries towards positive patient outcomes. At the same time, data sharing and big data analytic methods compel us to rethink ethical oversight and data privacy protections, such as ensuring meaningful consent, especially when data is highly sensitive.

The meeting between OBI and the Chairs and Delegates of Research Ethics Boards from across Canada was held to continue building relationships between OBI and the respective institutions. Research Ethics Boards review and approve research studies and are responsible for the ongoing ethical oversight of research involving human participants. Topics on the agenda included a presentation by Adrian Thorogood, McGill University, on The Emerging Landscape of Privacy and Data Sharing and round table discussions on how to better adapt informed consent language to fit evolving demands of research while reassuring study participants that the privacy and protection of their data is a top priority.

Translational Research Talks – Health Innovation

Garth Smith, VP of Business Development & Partnerships shared a panel with Bob Bell, Christopher Yip and Sandy Schwenger to discuss the stagnant incentives structures, culture accountabilities and information systems that add barriers to health innovation. By addressing these barriers through a collaborative approach that benefits the entire community, there can be an exponential scale-up and spread of healthcare innovations.

Neurocenter Finland Visits OBI

[Neurocenter Finland](#) aims to accelerate national and international research collaboration in the field of neuroscience, to connect research with practical patient care as well as with social and health innovations, and to promote new, brain health-related growth companies.

OUTPUTS	 Recognition of OBI Model
---------	---

Following a similar mission as OBI's, Neurocenter Finland paid OBI a visit to learn more about our organizational structures, Brain-CODE OBI's informatics platform and the effectiveness of our model.

Garth Smith, VP of Business Development & Partnerships at OBI, will deliver a talk on "Comments from Canada: How things are done at the Ontario Brain Institute" in response to a presentation on "Can AI make a true change in the neuro field – case HUS" by the Chief Innovation Officer, neurosurgeon Miikka Korja from Helsinki University Hospital.

The MindWorks Exhibit at the Ontario Science Centre

Do you know what makes you, you? In April 2019, the Ontario Science Centre (OSC) launched the [MindWorks](#) exhibition in collaboration with OBI as the Knowledge Partner from September 28, 2019 to September 30, 2020.

The mind-bending display guides you through a hands-on, bodies-on exploration of why you think, feel and react the way you do. You get an inside look at how supermarket displays capture our attention; the unreliability of memory; and how the brain's tendency to organize information into categories can result in unintentional bias.

“As a provincially-funded organization, one of our core objectives is to educate the public about their brain health,” said Dr. Tom Mikkelsen, President & Scientific Director, Ontario Brain Institute. “Our partnership with the Ontario Science Centre allows us to make

knowledge accessible, digestible and fun; enabling people to manage their own health and wellness and improving life quality.”

The partnership with the OSC includes three public talks, the [Great Conversations – The Mind Series](#) and a weekend full of activities – **Your Brain Matters.**

Great Conversations – The Mind Series Science Meets Psychedelics

As part of our partnership with the Science Centre, OBI hosted the first talk of the [Mind series](#) on March 7, 2020.

Speakers Drs. Anne Wagner and Norman Farb discussed cutting-edge research findings on the use of psychedelics to treat PTSD, anxiety and depression. Watch full public talk [here](#).

Nanology Labs Win \$200,000

Congratulations to OBI's ONtrepeneur Mohammad Ali Amini of [Nanology Labs](#), on winning the 2020 MEDTEQ investment pitch for \$200,000.

Nanology Labs developed safe and smart MRI contrast agents for early detection of brain tumors. A revolutionary non-toxic MRI contrast agent Manganescan™, uses the element manganese to illuminate early stage tumors, specifically in the brain. Early stage detection provides clinicians advance knowledge for diagnosis, better treatment options and patient outcome.

Congrats to Dr. Walter Swardfager on the Cardiometabolic Award

A shout out to Dr. Walter Swardfager on winning the 2019 HSRLCE/CHFS/BI-LILLY Cardiometabolic Award. This award will help him advance his innovative and ground-breaking research, which includes the use of oxylipin profiles through [ONDRI](#) – OBI's Neurodegenerative disorders research program.

CONNECT Partners with Organizations to Map Patients' Perspectives

OBI's concussion IDP, [CONNECT](#) published a collaborative research paper to help understand the benefits, challenges and motivators to engaging stakeholders in research by gathering perspectives of adults with lived experience of concussion. The object of this study is to provide insight on how to improve research quality and relevance. Read full paper [here](#).

Epilepsy Priority Setting Partnership (PSP)

Research is vital to finding better ways to improve the health and well-being of people living with brain disorders. With community input, research can be guided to address priorities that matter most to patients and clinicians. We are working with patient communities to set priorities for brain disorder research that align with their needs.

On February 29, 2020 the first survey for the [Epilepsy Priority Setting Partnership \(PSP\)](#) between OBI, [EpLink](#) (OBI's epilepsy research program), and the [James Lind Alliance \(JLA\)](#) closed. The survey received over 500 responses from across Canada from individuals who live with epilepsy or seizures, their caregivers and family members, and their health care providers.

These responses concerned questions related to diagnosis, treatment, day-to-day management and co-occurring conditions. OBI is currently in the process

of reviewing these responses against current evidence to determine evidence uncertainties. These uncertainties will be brought back to the epilepsy community to vote on to create a "top 10" list of research priorities.

This partnership helps give a voice to Canada's epilepsy community to inform research around the priorities that matter to them most and address their needs. For more details check out our [page](#).
